

## Soleno Therapeutics Announces Presentations Featuring VYKAT(TM) XR in Prader-Willi Syndrome at PES 2025

May 15, 2025 12:00 PM EDT

REDWOOD CITY, Calif., May 15, 2025 (GLOBE NEWSWIRE) -- Soleno Therapeutics, Inc. (Soleno) (NASDAQ: SLNO), a biopharmaceutical company developing novel therapeutics for the treatment of rare diseases, today announced poster presentations from its VYKAT™ XR (diazoxide choline) extended-release tablets, previously referred to as DCCR, clinical development program for the treatment of hyperphagia associated PWS at the Pediatric Endocrine Society (PES) Meeting 2025, which is being held May 15-18, in National Harbor, Maryland.

Details of the presentations are as follows:

### PES 2025

Title: *Long-term administration of diazoxide choline extended-release (DCCR) tablets in people with Prader-Willi syndrome: changes in lean body mass and lean mass Index*

Format: Poster

Session: Poster Session 3

Date/Time: May 17, 12:45 - 2:30 PM

Presenter: Jack Yanovski, MD PhD

Title: *Resuming diazoxide choline extended-release (DCCR) after 16-week randomized withdrawal is associated with significant improvements in hyperphagia and behavioral symptoms in PWS (Study C614)*

Format: Poster

Session: Poster Session 3

Date/Time: May 17, 12:45 - 2:30 PM

Presenter: Jack Yanovski, MD PhD

### About PWS

The Prader-Willi Syndrome Association USA estimates that PWS occurs in one in every 15,000 live births. The hallmark symptom of this disorder is hyperphagia, a chronic and life-threatening condition characterized by feelings of intense, persistent hunger, food pre-occupation, and an extreme drive to seek and consume food, which can severely diminish the quality of life for individuals with PWS and their families. Additional characteristics of PWS include behavioral problems, cognitive disabilities, low muscle tone, short stature (when not treated with growth hormone), the accumulation of excess body fat, developmental delays, and incomplete sexual development. Hyperphagia can lead to significant mortality (e.g., stomach rupture, choking, accidental death due to food seeking behavior) and longer term, co-morbidities such as diabetes, obesity, and cardiovascular disease.

### About VYKAT XR

VYKAT XR was approved by the U.S. Food and Drug Administration (FDA) on March 26, 2025, and is now commercially available to U.S. patients.

VYKAT XR is indicated for the treatment of hyperphagia in adults and pediatric patients 4 years of age and older with Prader-Willi syndrome (PWS).

### IMPORTANT SAFETY INFORMATION

#### Contraindications

Use of VYKAT XR is contraindicated in patients who have a known hypersensitivity to diazoxide, other components of VYKAT XR, or to thiazides.

#### Warnings and Precautions

##### Hyperglycemia

Hyperglycemia, including diabetic ketoacidosis, has been reported. Before initiating VYKAT XR, test fasting plasma glucose (FPG) and HbA1c; optimize blood glucose in patients who have hyperglycemia. During treatment, regularly monitor fasting glucose (FPG or fasting blood glucose) and HbA1c. Monitor fasting glucose more frequently during the first few weeks of treatment in patients with risk factors for hyperglycemia.

##### Risk of Fluid Overload

Edema, including severe reactions associated with fluid overload, has been reported. Monitor for signs or symptoms of edema or fluid overload. VYKAT XR has not been studied in patients with compromised cardiac reserve and should be used with caution in these patients.

##### Adverse Reactions

The most common adverse reactions (incidence  $\geq 10\%$  and at least 2% greater than placebo) included hypertrichosis, edema, hyperglycemia, and rash.

Please see the full [Prescribing Information, including Medication Guide](#).

### About Soleno Therapeutics, Inc.

Soleno is focused on the development and commercialization of novel therapeutics for the treatment of rare diseases. The company's first commercial product, VYKAT XR (diazoxide choline) extended-release tablets, formerly known as DCCR, is a once-daily oral treatment for hyperphagia in adults and children 4 years of age and older with Prader-Willi syndrome.
